AUTO PARTS FACTORY TO MAKE OTHER PRODUCTS

TO MAKE COMPRESSORS -- Sarajevo, Oslobodjenje, 4 Nov 51

The "Trudbenik" Automobile Parts Factory, which is producing spare truck parts, will soon begin producing compressors and pneumatic equipment.

Another shop, in addition to those already in operation, is now being built. A forging shop for intermediate forgings is also being built.

The most acute problem faced by the factory is the shortage of skilled manpower and engineering personnel, which it is attempting to alleviate by establishing a 3-year industrial school. However, skilled manpower will be needed in the very near future if operation is to be uninterrupted.

AIR COMPRESSORS BEGIN OPERATION -- Zagreb, Borba, 21 Nov 51

Ljubljana, 20 November -- The air compressors in the new forging shop in the "Litostroji" Factory began operation on 20 November. These compressors enable the factory's steel foundry to use pneumatic hammers for shaping forms and cleaning steel castings.

The production of castings, parts for axles, and other forgings is to increase considerably in the new forging shop, which is ten times larger than the premises in which it was formerly located.

BUILD 150-TON CRANE -- Zagreb, Borba, 17 Sep 51

Maribor, 16 September -- The "Franc Leskosek" Metal Constructions Factory in Maribor has built a 150-ton portable crane for the Vuzenica Hydroelectric Power Plant. This is the largest crane of its kind in Yugoslavia. The factory is now building a 120-ton crane for another Yugoslav hydroelectric power plant.
